

# LOXON<sup>®</sup>

## Exterior Masonry System

*Engineered to withstand the extremes  
of sub-tropical climates.*

*The advantages  
of a waterproofing  
coating without  
the disadvantages.*

### **LOXON System Advantages:**

- Withstands extreme sun, wind-driven rain, heat, humidity, and salt air
- Resists high alkalinity and efflorescence
- Highly elastic to help bridge hairline cracks
- Can be applied on high PH masonry surfaces
- Resists chalking and fading
- Highly mildew resistant
- Provides a beautiful color and sheen that lasts
- Breathable paint film

### **The Benefits to You:**

The LOXON family of coatings has been specially formulated for use in the harsh climate of sub-tropical coastal environments. Whether subjected to severe sun, wind-driven rain, heat, humidity or salt air, LOXON coatings beautify and protect the special building materials selected for this climate. LOXON coatings feature strong mildew resistance for durability, despite demanding exposures to harsh natural elements, year after year.

## Exterior Masonry Sealer, Acrylic Primer, and Acrylic Flat Coating

The complete  
**LOXON**  
System

*Use on: wood, brick, concrete,  
stucco or block, new or  
previously painted surfaces.*

*For new construction  
and repaints.*

### PERFORMANCE SPECIFICATIONS:

#### Moisture Resistance:

PASSES

MIL-P-14267B, 2-hour immersion

#### Wind-Driven Rain Test:

PASSES

TT-C-555B, 98 mph wind velocity

#### Moisture Vapor Permeability:

1.2 perms

ASTM D 1653-72, 1 coat @ 4.6 mils dft

#### Flexibility:

PASSES

ASTM D 1737, 180° bend,  
1/8" mandrel

#### Tensile Strength:

220 PSI

1 coat @ 4.6 mils dft

#### Elongation:

400%

1 coat @ 4.6 mils dft

#### Alkali Resistance:

PASSES

TT-P-1511B 4.4.11

#### Mildew Resistance:

PASSES

### *Applies easily in extreme Southern climate conditions*

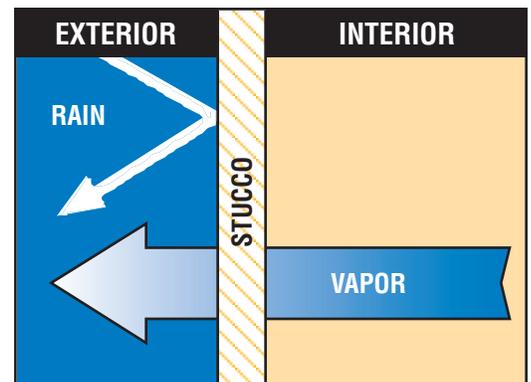

LOXON is the perfect choice for professionals needing a high-performance coating system for exterior above-grade masonry surfaces. Its highly elastic formulation helps bridge hairline cracking, and can even be applied on hot concrete, stucco and block surfaces, making the most of application time. LOXON can be applied to surfaces with a Ph level as high as 13, with no resulting efflorescence problems. Loxon provides all the advantages of an elastomeric coating, without the disadvantages.

### *A high-quality finish that lasts*

Best of all, a LOXON coating maintains its integrity and the beauty of its original appearance despite hot, humid, cool and damp conditions. Loxon resists mildew and actually provides a protective shield against moisture, having passed a wind-driven rain test of 98 MPH. The service life of a LOXON coating ranges far beyond average coatings used in tough Southeastern conditions, maintaining original color and sheen.

### *LOXON performs where it counts*

The LOXON family of coatings is perfect for use on single family homes, multi-family units, high-rise condos and commercial & institutional buildings. Apply it on all above-grade masonry surfaces from concrete to stucco to block, and count on a beautiful, lasting finish every time.

The Loxon system allows the coating to resist wind driven rain. It also allows the masonry structure to release moisture vapors without interfering with the adhesion and the performance of the coating.
